

APPLICABLE TO:

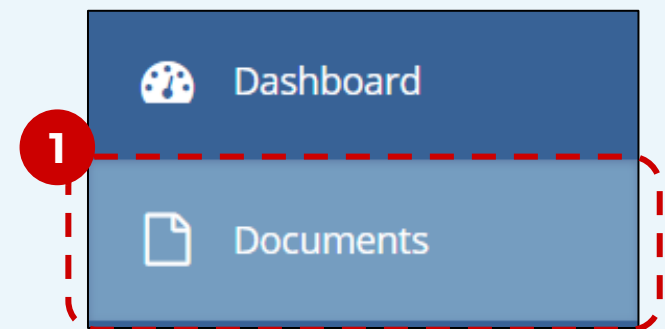

- Admin
- Manager
- Editor
- Reader
- eTMF
- eISF

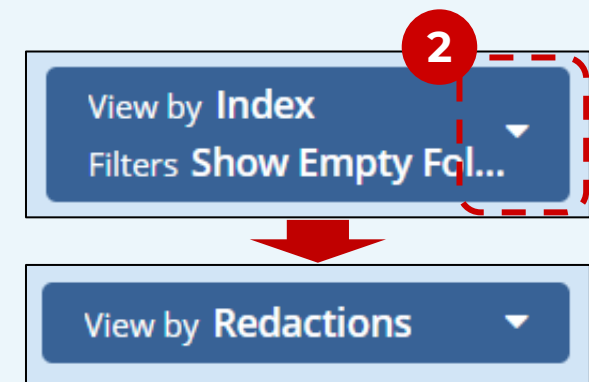

Users may only perform redaction if they have been assigned the respective action by an Administrator (via the [User Management](#) module).

In order for a document to be redacted, it must first be marked as **Containing Restricted Content** (see related job aid).

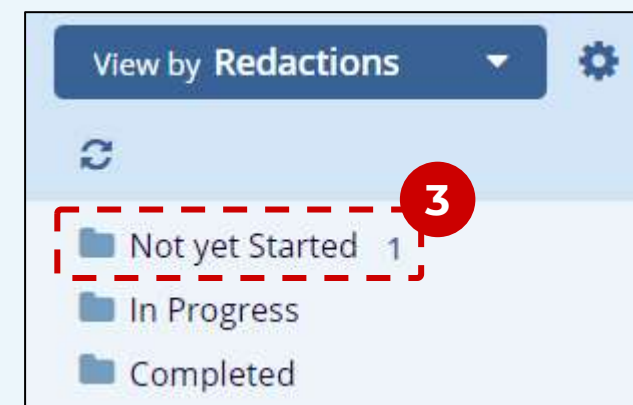

1 Log in to a room, and navigate to the Documents module.

2 Using the [View selector](#), switch to the **Redactions** view.

3 Documents awaiting redaction are stored in **Not yet started**.

4 Select a document.

Note: Documents under redaction are marked in grid views with a shield – the color indicates at what stage of Redaction the document is.

5 Switch to **Document View**.

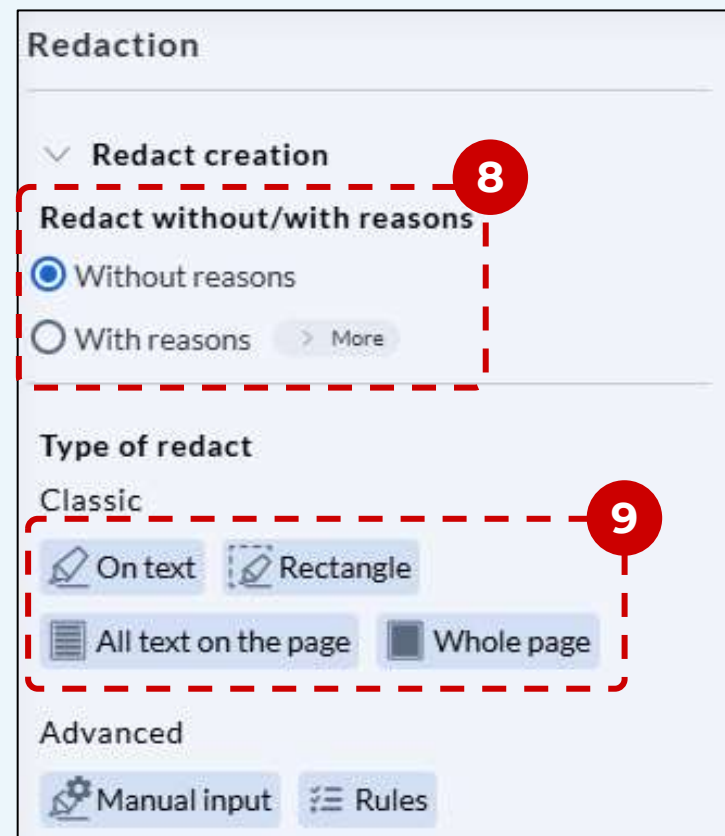

6 Expand the More Actions list (ellipsis button), then click **Start Redaction**.

7 Click on the **Redact browser** button on the left-side menu.

8 Choose your preferred style of redacting.

9 Select **how** you will apply the redaction.

10 If you selected On Text or Rectangle, **apply** the redaction directly on the page.

- 11** Apply redaction as many times as necessary. When you are satisfied, click the **Save** button (floppy disk icon) in the ribbon.

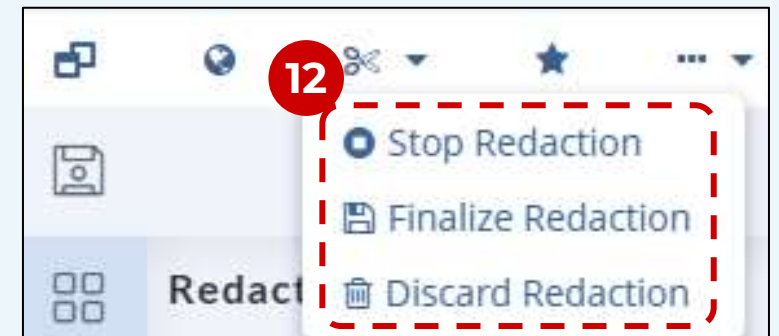

Principal Investigator: _____
Protocol #: _____ TYP-0034 _____

Staff Member	Title/Role (e.g., PI, Sub-I, Study Coordinator, etc.)	Signature
_____	Principal Investigator	_____
_____	Med Assistant	

- 12** Expand the **Complete Redaction** (scissors icon) menu in the ribbon and choose one of these options:

Stop Redaction – save changes for later.
Finalize – Save and lift visibility restrictions.
Discard – undo all changes.

A redaction process is complete only when Finalize is used.

- 13** Documents in a completed redaction state are marked with a green shield. Any users can see the redacted version of the document, but not the original.

 **Note:** Admins and users with Redaction privileges will always be able to see the unredacted original.
